

INTEGRITY
TRAILERS

TRAILERS YOU CAN COUNT ON.
FOR THE LONG HAUL.

“If you've ever ‘white-knuckled’ it on a tough stretch of road or in inclement conditions, you know how stressful trailering can be. The trouble was, you weren't pulling an Integrity Trailer. I guarantee you'll feel safer pulling an Integrity Trailer.”

Bill Hogan—President, Integrity Trailers

FOR OVER 20 YEARS, INTEGRITY TRAILERS HAS BEEN BUILDING THE FINEST UTILITY AND BOAT TRAILERS AVAILABLE ANYWHERE. OUR STANDARD AND CUSTOM MODELS ARE DESIGNED SMARTER, ENGINEERED STRONGER, AND BUILT BETTER THAN ORDINARY TRAILERS. THAT'S WHY YOU CAN COUNT ON INTEGRITY TRAILERS TO PROVIDE YOU WITH ABSOLUTE RELIABILITY AND PEACE OF MIND FOR YEARS TO COME.

- 1 Complete Welds**
Each joint is welded to produce a much stronger frame. The tube itself will fracture prior to the weld joint. This makes our trailers longer lasting and more durable.
- 2 Heavier Frames**
Integrity frames are significantly heavier than most trailers on the road because we use more high-quality, heavier gage steel than our competition. On some models up to 40% more steel.
- 3 Frames Resist Rust**
Our frames are designed to resist rust longer than other trailers. Our painted trailers start with redcoat steel, which is pre-primed at the mill. With the unique galvanizing option, the frames are completely immersed in a galvanizing process that creates the most durable protection against rust available today.
- 4 5-Step Painting Process**
Our rigorous 5-step painting process includes 2 coats of etching primer, covered with 3 coats of durable industrial grade paint to assure the best-looking, longest-lasting finish of any trailer.
- 5 Custom Fit Boat Trailers**
Every Integrity boat trailer is custom fit to the exact bottom design of each individual boat, providing a more secure load for greater stability and safety. Our measuring process assures that our tubular uprights and pads precisely match the most complex contours of any boat's bottom, from "step" hulls to displacement hull designs.
- 6 Waterproof Electrical**
From sealed light capsules and heat shrink wiring connections, to individually grounded lights—great care is taken to ensure safety and protect the electrical system of an Integrity Trailer from moisture.
- 7 Frame Protected Lights**
Our lights are protected from impacts and the elements. All Integrity Trailer lights are recessed into the frame, protecting them from potential damage. They are also mounted into rubber to make them flexible to avoid "jarring" the filaments.
- 8 Truck Style Lighting**
We use safer—and brighter—truck style lighting. Integrity Trailers use standard truck style lights with optional LED lighting as a further safety enhancement. All lights are individually grounded for easy troubleshooting.
- 9 Frame Mounted Tie Downs**
Integrity Trailer tie downs are always built in. We offer several different kinds of frame mounted tie downs for securing your load. This is standard on all our trailers, right down to our smallest models.
- 10 Radial Tires**
We always use full-sized radials and never undersized bias ply tires. Radials last significantly longer and are far more economical in the long run. Each set is the correct size and capacity to provide a full margin of dependability, effective load handling, and safety on the road.
- 11 Treated Lumber or Oak vs. Pine**
We use high-quality treated lumber versus cheap pine. Our light and medium duty utility trailers use standard sized pressure treated lumber, which can be easily replaced if necessary. Our heavy-duty equipment haulers incorporate Oak decking, with extra structural supports to handle the added weight.
- 12 Jacks**
Our trailers use higher capacity—higher quality jacks. Many manufactures save money by skimping on cheap jacks that won't last as long as the trailer. Each one of our jacks is matched in capacity and features to meet each trailer's specific requirements, for a lifetime of trouble-free use.
- 13 Safe-T-Lube Axle System**
Every Integrity Trailer—from the smallest 5 x 8 utility to the largest gooseneck—is equipped with the Safe-T-Lube axle system. This means an extra margin of protection for you and your loads—with lower maintenance costs and significantly longer bearing life.
- 14 Back Up Brake Systems**
A trailer's braking system is one of its most important features and safety is one of our highest priorities. That is why we rely on two braking systems—not just one. The electric and hydraulic brake systems on Integrity Trailers have a fail-safe back-up system that will stop the trailer—independently of the tow vehicle—should any problems arise.
- 15 Safety Cables vs. Chains**
Integrity Trailers feature safety cables instead of chains. Every one is oversized and plastic coated to be stronger and last longer than the rust-prone chains.

There's an Integrity Trailer for nearly every application. Our limits reach as far as your imagination.

The Integrity Engineered Difference.

At Integrity Trailers, our mission is to provide a solution to your hauling needs, with a broad product line of premium trailers for marine applications, automobile haulers, along with equipment and general utility trailers. Our products offer an exceptional value for those who seek the highest level of quality, attention to detail, and features with rugged commercial-grade construction techniques. As a company, we strive to exceed our customer's expectations by providing an unmatched level of service. Integrity isn't just our name; it's our reputation and yours.

Complete Welds

Each joint on the frame is completely welded, consuming more labor time, but ensuring the structural integrity of the trailer. The joints are so strong, the tube itself would fracture before the weld would break. We also incorporate these painstaking measures at the ends of the expanded metal on the gates. This guarantees the mesh does not separate from the gate where it is common for the mesh to separate from the frame.

Benefit—Our trailers last longer and are more durable.

Heavier Frames

Integrity frames are significantly heavier than most trailers on the road because we use more high-quality, heavier gage steel than our competition—on some models, up to 40% more steel.

Benefit—Our frames handle more weight, eliminate stress fractures and flexing, and perform better on the road.

Finish

We invest the time to ensure our finish lasts longer with a 5-step painting process or galvanizing. The painted trailer's finish will last 5-10 times longer than our competition. The galvanized trailers will last up to 30 years without rusting.

Benefit—Long-term durability.

Custom Fit

Our "Perfect Fit" system ensures that each trailer is built specifically for the unique hull designs of today's boats. Support is critical to maintain the structural integrity and resist hull fractures and cracking—compromising the performance and, more importantly, the safety of the boat.

Benefit—Will not damage the boat.

Waterproof Electrical

From sealed light capsules and heat shrink wiring connections, to individually grounded lights—we have taken 22 years of building boat trailers and perfected the reliability of the electrical systems. The added bonus is that we have applied this technology to our utility trailers.

Benefit—Safety, reliability, and durability.

Premium Running Gear

We use radial tires exclusively because loads are managed more effectively and wear longer than bias ply tires. We also use the Safe-T-Lube axle lubrication system, which simplifies the maintenance of the bearings. Properly maintained bearings lower the risk of bearing and axle failure on the road.

Benefit—Safety, reliability, and durability.

MAXIMUM SAFETY. GREATER LONGEVITY.

- Full weld vs. spot weld (more strength, longer life)
- Full frame welded mesh gates vs. spot welded (provides superior load strength and longer life)
- Heavier steel frames (added stability, greater strength)
- Maximum paint protection (5-step painting process)
- Maximum rust protection (hot dipped galvanizing, or redcoat steel)
- Custom fit for safer weight distribution (available on all boat trailers)
- Highest quality lighting components
- Moisture resistant shrink tube wiring connections
- Individually grounded lights
- Built-in lights (protected in frames and rubber mounted for filament protection)
- Tool-free light bulb replacement
- Built-in tie downs (standard on all utilities)
- Full-size radial tires (provides maximum stability, better ride, longer wear)
- Safety lube axle systems (longer bearing life, lower maintenance)
- Highest quality jacks (greater stability and longer life)
- Rubber-coated safety cables vs. chains (greater strength, longer lasting)
- Brake-away back-up systems (provides maximum safety and load protection)

WHAT THE INTEGRITY OWNERS AND DEALERS HAVE TO SAY.

"I have been purchasing custom boat trailers from Integrity Trailers for the past 10 years. I like doing business with Integrity Trailers because I can get a boat trailer custom manufactured the way I want it, and they are very price competitive in the market."

Arlen Meeuwse—Zeeland, Michigan

"Through the years, Brookview Lawn Care has purchased eight Integrity Trailers because of the quality build, design, and materials used. Buying inexpensive trailers is not the best way to go—we learned that lesson the hard way."

Brookview Lawn Care—Zeeland, Michigan

"I purchased my first Integrity Trailer in 2006. I like the versatility of the trailer and appreciated the 'can do' attitude of the employees. There was a true willingness to meet my need as a customer. I am extremely pleased with my trailer and the service given—you may pay more, but you will be happier with the end product."

Dick Witham—North Muskegon, Michigan

"I live in Indianapolis and have purchased five boat trailers from Integrity Trailers. I could purchase trailers much closer to home, but I drive 250 miles out of my way because my experience is always positive, and they make things happen for me. They cover all important aspects of customer relations...they do what they say, the standard of quality is consistent, and I enjoy the friendly atmosphere."

Bill Hayes—Indianapolis, Indiana

"Spartan Distributors has a long time business relationship with Integrity Trailers because they build our trailers to meet our specifications and if an issue arises...it is taken care of. We continue to conduct business because of the quality and service provided. We could buy trailers at half the price, but choose not to because we value our employees' time and safety and can not afford to be broken down. We don't shop other trailers."

Spartan Distributors—Sparta, Michigan

Integrity Trailer Dealer for utility trailers

"I chose Integrity Trailers because of the balance between quality, price and service. Don't overlook what Integrity Trailers can do to accommodate your trailer needs. Go for it!"

Jack Kelley—Grand Haven, Michigan

"Integrity Trailers has been building utility trailers for my customers since 1999, and I continue to do business with them because they build fantastic trailers! They offer a galvanizing program that no other trailer manufacturer offers. The quality is excellent, and they stand behind what they build."

Magnum Equipment—Holland, Michigan

"Integrity Trailers repaired my 41' Sabre boat trailer and completely painted and refurbished my 28' Sabre boat trailer. Their work was awesome! They were responsive, timely, cost effective, and took the time to understand what I really wanted."

Mark Peters—President / CEO Butterball Farms, Inc
